

Science at GSHS

The GCSE Scheme

Following the Edexcel GCSE Specifications, learners will follow one of 3 routes. All units are planned to further develop application, analysis and practical skills.

The Establishing Scheme

These units build on the Fundamental principles from Y7. Learners begin to make links between key concepts and apply science phenomena to a wider range of contexts

Each unit supports the development of numeracy, literacy and practical skills and includes a dedicated careers lesson linked to the knowledge and skills.

The Fundamentals Scheme

Each unit of carefully sequenced lessons enables the learner to progress through the key concepts in science. The Fundamentals scheme provides the sound foundations for the entire Science Curriculum at GSHS.

Each unit supports the development of numeracy, literacy and practical skills and includes a dedicated careers lesson linked to the knowledge and skills.

Primary Science Curriculum

We maintain strong links with our primary feeder schools and believe they have a thoughtful, well planned curriculum for our learners. Our Fundamentals Scheme builds on the formative learning at primary school.
